

## Donaghys Myco-RF®

### For control of Rust and Fusarium

- Controls Rust and Fusarium in pasture resulting in cleaner, healthier and more palatable pasture.
- Prevents the slowing of growth, rate of aging and death of grasses caused by Rust and Fusarium
- Increase dry matter production of Rust and Fusarium affected pastures
- Reduces ill thrift in stock caused by Rust and Fusarium
- Is systemic and once absorbed into the plant tissue is active for up to 30 days
- Interferes with the fungus's reproductive system
- Is best applied to pasture when rust first appears thus destroying the fungus before it can severely damage the plants.
- Rust develops rapidly if unchecked but when Myco-RF is applied rapid reduction in spores is achieved.
- There is a 10 day withholding period for grazing after application.

### What is Rust?

- Rust is a fungal disease of grasses which occurs in summer/autumn
- Rust can vary from a few brown 'pustules' to severe infestation which will kill grass
- Rust slows leaf growth, increases the rate of ageing and death of grasses
- Heavy rust infestations may reduce total herbage by 40%
- Dead matter in rusted pasture can increase the occurrence of Facial Eczema and Fusarium.

### APPLICATION RATES:

Myco-RF – 236g / Hectare

#### Water Rates

Aerial – 50 Litres / Hectare

Ground – 100-200 Litres / Hectare
