DOUBLE ACTIVE

## ACTIVE INGREDIENTS

15 g/L Eprinomectin and 26 g/L Levamisole. Contains: 200g/L Dimethylsulfoxide **DONAGHYS** PERFORMANCE FIRST

Scorpius Elite Spot-on contains two broadspectrum anthelmintics from different drench families. Eprinomectin is a member of the macrocyclic lactone drench family and levamisole is an imidazothiazole. Scorpius Elite product in a manner other than as recommended on the label. Spot-on is effective against strains of internal parasites sensitive to one or both of the anthelmintics in this drench.

Anthelmintic resistant strains: Scorpius Elite Spot-on may be effective in some the shoulder blades populations of gastrointestinal worms with single or dual resistance to the avermectin/milbemycin, benzimidazole or levamisole/morantel anthelmintic action families. Resistant populations must be susceptible to one or more of the anthelmintic actives in the drench for it to be effective

It is effective against susceptible strains of the following parasites of sheep:

Scorpius Elite Spot-on applied to the skin of crossbred sheep at the recommended dose volume of 1mL/2.5kg liveweight is effective for the treatment and control of sensitive strains of the following adult and immature parasites (\*includes inhibited fourth stage larvae):

ABOMASUM Barber's Pole Worm Small Brown Stomach Worm Stomach Hair Worm	Haemonchus contortus * Teladorsagia circumcincta* and trifurcata* Trichostrongylus axei
SMALL INTESTINE Black Scour Worm Small Intestinal Worm Thin-Necked Intestinal Worm Threadworm	Trichostrongylus colubriformis, T. vitrinus Cooperia curticei* Nematodirus filicollis, N spathiger Strongyloides papillosus
LARGE INTESTINE Large Bowel Worm Large-Mouthed Bowel Worm Whipworm	Oesophagostomum venulosum Chabertia ovina Trichuris ovis
LUNGWORM	District of the Control of the Contr

DOSAGE AND ADMINISTRATION By law, the user must take due care, seeking expert advice if necessary, to avoid unnecessary pain or distress in the treated animal when using the

For use in a strategic worm control program: speak to your animal health adviser or veterinarian. under 16 kg live-weight For topical application only. Administer as a spot directly onto the skin on the backline between

Resistance can develop to any Anthelmintic. Ask your local veterinary practitioner or animal health adviser for recommended parasite management practices for your local area to reduce the potential for resistance to develop It is advisable that a resistance test be conducted regularly when using any parasite treatment.

oses of 3 or more times those recommender can cause symptoms of Levamisole toxicity, so estimate live-weights carefully.

ehydrated animals may be more susceptible to toxicity. Fatal interactions may occur between Levamisole and Organophosphate dips.

A representative sample of animals should be weighed before treatment. Dose the mob to the heaviest animal by live-weight in each group (ewes, wethers, rams, lambs). Do not underdose. If there is a large variation in size within the group, draft into two or more lines based on bodyweight to avoid excessive overdosing.

DO NOT exceed the stated dose, or dose more frequently than 3-weekly.

Check accuracy of drenching equipment regularly. Clean gun thoroughly before and after use.
